AquariuOS Users

This system diagram shows the structural domains and governance architecture of AquariuOS. All domains operate on a shared constitutional foundation: the Coherence Marker protocol, which defines six fields for tracking misalignment without judgment and one invariant protecting the right to reframe. The Witness subsystem monitors these marker patterns across all domains to detect systemic integrity threats. Detailed field specifications appear in Chapter 3.

AquariuOS Users Exists in 4 Places at once.
Users are inside the system at the center of the diagram, where they interact with the different domains of AquariuOS. Users access the system & understand its complexity through the Steward & users are able to give feedback about the system to the Steward. Users look to the AI Witness for AquariuOS system's external view of the world, as well as mapping possible shadow patterns infiltrating the AquariuOS. Users have democratic power in choosing the 15 seats of the WitnessCouncil that audits the AI Witness for impartiality. Lastly, Users are able to see the Lunar Constellation of the different Moons - Labor, Faith-based organizations, Science organizations etc. Users are able to see the different views of situations based on their frame.
